

## God, Physics and the Human Prospect

### Weekly Question

*“There is meaning in every journey that is unknown to the traveler.”*

— **Dietrich Bonhoeffer**

*We are to find God “in what we know, not in what we don’t know; God wants to be grasped by us not in unsolved questions but in those that have been solved.”*

— **Dietrich Bonhoeffer** (*Letters from Prison*)

During the term we have talked of many things and you have read Midgley on, among other things, the questions around Teleology. Consider what you have read as well as the above quotes to help you formulate a response to the “Intelligent Design” argument/movement/agenda as it is offered today. How can we avoid this argument (or perhaps you wish to defend it?) and at the same time honour the spirit of the above quotes from Dietrich Bonhoeffer? In your discussion (2 pages, single spaced would be good) unpack what ID is about, it’s relation to earlier such arguments and why you either agree or disagree with this as a way of addressing science and religion issues.

Alistair McGrath’s *Science & Religion* will also be helpful here.
